

Financial Dream Planner - Mobile Feature-Driven Development PRD Pack

This pack breaks the Android-first Expo mobile application into small, dependency-aware feature modules. Each module is designed to be implemented, reviewed, tested, and handed to an AI coding agent independently.

Recommended reading order

1. 00_mobile_fdd_overview.md - rules, architecture, folder model, shared conventions
2. 01_foundation_app_shell.md - Expo setup, providers, navigation, design system, API client
3. 02_auth_onboarding.md - authentication and progressive onboarding
4. 03_accounts_financial_state.md - accounts, balance provenance, freshness, financial state
5. 04_transactions_sms_sync.md - manual transactions, SMS import, parsing, dedupe, review
6. 05_goals_financial_health.md - max-three goals and deterministic health score
7. 06_plan_drift_scenarios.md - baseline plan, projection, roadmap, drift, scenarios, history
8. 07_loans_debt.md - loan management, EMI modeling, prepayment simulations
9. 08_ai_research.md - chat, SSE, context assembly, research, confirmation boundaries
10. 09_notifications_settings_offline_release.md - notifications, privacy, offline, Play release gates
11. 10_delivery_roadmap.md - production sequence, milestones, acceptance gates, Definition of Done

Core rule

Build vertical slices, not giant layers. A feature is complete only when its route, UI, API integration, error/loading states, tests, analytics-free logs, and acceptance criteria are all complete.

Product loop

Understand finances -> import reality -> generate plan -> observe change -> detect drift -> research/simulate -> recommend next action -> user confirms meaningful changes.
